

Anode bed 1
15' long trench
3' wide

Anode bed 2
15' long trench
3' wide

There is a tomcat at both of these locations. I need a trench dug and filled. The tomcats are just a solar panel on a pole. The north one is just south of the gas station and the south one just north of DRS2.

The plan is to install 3 3"x60" graphite anodes and 1500lbs at each location. I have the supplies in Rosemount and need them transported to the location. The anodes are in a 5'x3'x3' crate and the coke breeze on a single pallet.

Camp Ripley Tomcat
anode replacement
